Churn Rate

26.54%

Revenue at Risk

\$139K

Churn VS Retained Customer

Churn Trend by Tenure (months)

1 in 4 customers is leaving

Out of every 4 customers, 1 has cancelled their service. This is above the typical industry average of 15–20%, meaning retention efforts need immediate attention.

\$139K in monthly revenue at risk

This is the total monthly billing from customers who have already churned. Retaining even half of them could recover over \$69K in recurring monthly revenue.

Churn is highest in the first months

The line chart shows a sharp drop in the first 10 months. Customers who stay beyond 20 months are far less likely to leave — early engagement is the key.

Customer Segmentation

IBM Telco Dataset · 7,043 customers

Churn Rate by Contract Type

Churn Rate by Internet Service

Churn Rate by Payment Method

Churn: Senior VS Non-Senior

Month-to-month contracts drive most churn

Customers on month-to-month contracts churn at 43% — over 10× higher than two-year contracts. Incentivising longer contracts is the clearest retention lever.

Electronic check users churn the most

45% of electronic check users leave vs 15% for card/bank transfer users. Encourage customers to auto-pay may significantly reduce churn risk.
